EDUCATION

Degree	Specialization	Institute	Year	CGPA
B.Tech	*Artificial Intelligence (AI)*	Anurag University	2025	8.18
TSBIE	*Physics, Chemistry, & Mathematics*	Sri Chaitanya College	2021	9.4
SSC	-	Sai Chaithanya	2019	9.7

TECHNICAL SKILLS

- **Languages:** Python, C, Java, JavaScript, HTML, CSS , MySQL
- **ML/DL Frameworks**: TensorFlow, Keras, PyTorch, Scikit-learn
- **FrameWorks:** React.js , Node.js , Express
- **Tools:** MS Excel,Colab,Jupyter, GitHub ,Postman

INTERNSHIPS

COGNIFYZ TECHNOLOGIES (Machine Learning Virtual Internship –Feb 2025 to Mar 2025)

- Developedandimplementedmachinelearningmodelsforfourtasks,including restaurant rating prediction, restaurant recommendation systems, and cuisine classification.
- Achieved 98%accuracy on a regression task, demonstrating strong model performance and effective data analysis.

PROJECTS

- **PestID: Automated Crop Pest Detection and Management using NLP and DL**
  - Engineered a Vision Transformer (ViT-Base-Patch16-224) model trained on the IP102 dataset (75,000+ images across 102 pest species), achieving 99.65 accuracy in pest classification through advanced preprocessing (image resizing, normalization) and data augmentation (flips, rotations, brightness adjustments). Outperformed traditional CNNs in precision, recall, and F1-score by leveraging transformer architecture for superior feature extraction and small-object detection in agricultural environments.
  - Developed a Flask-based web application enabling farmers to upload pest images for real-time identification, generating multilingual pest descriptions, prevention strategies, and pesticide recommendations. Integrated NLP with Google Translate API and gTTS for Telugu translation and text-to-speech conversion, ensuring accessibility for non-English-speaking users. Validated model robustness using 15 test data, bridging AI and agriculture to reduce crop losses and empower farmers with scalable, AI-driven pest management. Technologies: **PyTorch, TensorFlow, NLP, Flask, Python.**
- **WASTE MANAGEMENT SYSTEM**
  - **Deep Learning Project**
  - Developed an AI model to classify waste into categories such as cupboard, plastic, electronic, and medical waste, achieving a validation accuracy of 83.19and a validation loss of 0.5641.
  - Built an interactive website using Streamlit, integrating OpenCV to enable real-time camera access for live waste detection and classification across 25 categories.

CERTIFICATIONS

- **4 star** rating @hackerRank https://www.hackerrank.com/profile/saikiran0164
- Successfully Completed Data Visualization with Power BI course from **Great Learning**
